Columbia Tower Club, 701 5th Avenue, 76th Floor, Seattle
\$40 | Please Pre-register at <http://wsbdc.org/events/>

Experts are seeing a trend in hackers focusing their efforts on small to medium-sized businesses because their security systems are easier to penetrate. Personal employee and customer information is at risk.

Do your systems have enough protection? Where do you begin? Come to our community workshop to find the knowledge and resources your business needs to lower its risk of a data breach.

Identify

Protect

Detect

Respond

Recover

1. Identify

- What needs protection in your business
- Common cyber attacks that may be used against your business
- The risks and costs of not being prepared for a cyber attack

3. Detect

- Implement company policies
- Buy and regularly update antivirus software
- Teach employees to recognize cyber attacks

5. Recover

- Learn how to limit the time and money spent on the recovery process
- Get rid of all traces of malicious code and make sure systems are secure
- Contact the proper authorities

2. Protect

- Train your employees to make smart decisions on electronic devices
- Use firewalls, encryption and strong passwords
- Actively assess and manage cyber risk

4. Respond

- Develop an Incident Response Plan
- Do a simple and low cost risk assessment for your business
- Actively manage your business's security risks
